

# NICU

## Real-Time Charting Module

- Systemic infant assessment.
- Easy-touch, comprehensive menus & medication lists.
- OBIX device interfaces for auto-charting entries from NICU devices.
- Extensive lab & diagnostic test and documentation options.
- Ongoing, episodic records of infant's apneic & bradycardic occurrences.
- Continuum of documentation from stabilization period through discharge.
- High & low-risk procedure list indicating procedure tolerance and interventions.
- System enables user to document environmental checks & alarm limits customized to unit specific parameters.
- Multifaceted discharge planning & implementation for early identification of discharge needs.
